EDUCATION

University of Michigan–Dearborn | B.S. Electrical Engineering | Sep 2023 – Aug 2027 | Dearborn, MI

Henry Ford College | Associate of General Studies | Sep 2020 – May 2023 | Dearborn, MI

RELEVANT EXPERIENCE

Vehicle Test Evaluator (System Validation) — Performance Driven Workforce | Oct 2023 – Jan 2024 | Allen Park, MI

- Conducted full 8-hour vehicle testing shifts, typically evaluating 1 vehicle per day against system validation requirements.
- Documented system deviations and communicated findings to engineering teams to support root-cause analysis.

Electrical & Controls Systems Member — Intelligent Systems Club | Oct 2024 – Mar 2025 | Dearborn, MI

- Collaborated with club members to design and route a custom PCB integrating a Teensy microcontroller with vehicle subsystems.
- Worked with the team to implement and tune PID control algorithms and evaluate performance using hardware-in-the-loop (HIL) testing.
- Integrated protection circuitry and tested fail-safe behavior under simulated fault conditions.

Frontend Developer — PriceWatchPro | Jan 2025 – Apr 2025 | Remote

- Identified and fixed user-interface defects while verifying application layout and behavior.
- Used GitHub workflows for version control, code reviews, and approved merges.

ENGINEERING PROJECTS

SDV Simulation — Architecture & Logic | Jan 2026

- Built a multi-node software-defined vehicle simulation to test coordinated ECU behavior and signal interactions.
- Unit-tested acceleration and braking logic; evaluated responses to battery state-of-charge faults, including parking behavior and safety alerts.

CAN Integration Lab — Communication Design | Jan 2026

- Created a vehicle subsystem communication matrix in Vector CANdb++ to define and trace CAN signals.
- Documented configuration and verification procedures to support repeatable system testing.

RC Vehicle — Closed-Loop Control | Feb 2023

- Built a microcontroller-based RC vehicle and tested steering, drive, and real-time motor-control behavior.

TECHNICAL SKILLS

Programming: C++, Python, HTML

Engineering Software: MATLAB/Simulink, Vector CANdb++, Vector CANalyzer, LTspice, Altium, GitHub, CodeX

Hardware & Testing: PCB design, circuit testing, soldering, PID tuning, HIL testing, system validation

CERTIFICATIONS
